SecureTrust™ Software Security Framework Assessment Services

METHODOLOGY DRIVEN BY EXPERIENCE

Developing secure applications requires robust and mature processes and procedures as well as skilled personnel. Vendors undertaking a Payment Card Industry Secure Software Framework (PCI SSF) validation need to stay current with the changing landscape of payment application security.

SecureTrust™ delivers assessment services for the standards under the SSF, helping you achieve compliance with the Secure Software Lifecycle (Secure SLC) and the Secure Software Standard. SecureTrust offers their industry-leading Compliance Validation Services (CVS) methodology to assist you in maximizing your investment, improving your security posture and helping you drive your compliance efforts.

SecureTrust offers unparalleled global coverage, delivering outstanding value and availability of highly skilled security assessors worldwide. Our experienced assessors paired with our robust methodology allows for an assessment experience that will drive security and compliance for your organization and applications.

Professional Services

Achieving compliance with any standard is just the first step, once a compliant status has been achieved, you must also work to maintain that compliance, which requires planning and a mature security strategy. We can help you to not only achieve compliance but to be your security advisor on your compliance journey.

Whether you are looking to become compliant with the Secure SLC, or the Secure Software Standard, a compliant report is our common milestone, we can assist you in getting there, and to maintain business-as-usual compliance once the assessment has been completed.

Our robust and proven methodology enables you to simplify the assessment, providing the tools needed to track action items and the assessment status in real-time through our proprietary online Compliance Manager portal.

Each SecureTrust client is assigned a trained and certified security assessor and a manager, to act as your trusted advisor. Once the assessment has been concluded, the SecureTrust Quality Assurance (QA) department will review the report deliverable for correctness, accuracy, and adherence to the reporting requirements before delivery to you for review.

In addition to the team above, additional experts and project managers may be assigned to you as needed to complete the engagement in a timely and efficient manner.

Flexibility

Having assessed applications and development processes for over a decade, we at SecureTrust know that each organization is unique and that there is no one-size-fits-all way to compliance.

All organizations have different maturity levels, our security assessors will work with you to highlight areas that may require strengthening and modification to meet the intent of any given control. As each approach to compliance and security controls are different, we adapt our assessment and work with you to plan the best way for your specific organization to achieve a compliant status.

The standard under SSF requires comprehensive understanding and testing to produce the evidence needed, the SecureTrust portal enables you to have direct access to action items and assessor requests, providing overview of your current status.

The SSF, and the Secure Software Standard in particular, requires that security testing, including code review and penetration testing is performed as appropriate for the technology and application under review. SecureTrust provides a wide range of security testing capabilities, from vulnerability scanning to industry-leading in-depth application penetration testing.

SecureTrust Compliance Manager

Your engagements with SecureTrust are delivered through the SecureTrust Compliance Manager portal for seamless integration and interactions with your assessor and real-time availability of your current status for your compliance and security programs.

The Compliance Manager portal contains action items, secure document sharing through the File Library and allows you and your assessor to share information necessary for compliance in a secure way.

Services beyond the SSF

SecureTrust is the industry leader in compliance, beyond being a SSF Assessor company, SecureTrust provides comprehensive compliance programs and is listed as a Card Production Security Assessor (CPSA), Payment Application Data Security Standard (PA-DSS) Assessor, Qualified Security Assessor Company (QSA-C), Qualified PIN Assessor (QPA), Point-to-Point Encryption (P2PE), Three-Domain Security (3DS) and the Tokenization Service Provider (TSP) Assessor.

Methodology driven by Experience

As an industry leader, SecureTrust has pioneered and driven compliance for thousands of payment applications and companies worldwide. SecureTrust has the experience you need to help you streamline your compliance efforts, reduce cost, risk and to maximize your return on investment.

Whether it be general consulting, pre-assessment, gap analysis or pure assessment services, SecureTrust can tailor our offerings to fit your needs.

Our approach to compliance is adapted to meet the maturity of your organization, as an example, should you require additional support and consulting in the pre-assessment phase, we offer workshop-based consulting services to help you address any questions about the standards, assessment methods or any other queries you may have in relation to the program. By structuring the assessment in phases, you will be able to allocate resources and plan your activities accordingly, this provides a balanced and effective method to enable you and your team to focus your efforts in meeting goals throughout the assessment phases.
